**Annotations:**

*1. Explanatory Notes*

*Consumer Price Index (CPI) is an index measuring changes over time in the price level of consumer goods and services purchased by residents, which comprehensively reflects the changes of price level.*

*2. Statistical Coverage*

*Consumer Price Index (CPI) covers the prices of goods and services of 8 categories and 262 basic dishvisions which cover the living consumption of urban and rural residents, including food, tobacco and liquor; clothing; residence; household articles and services; transportation and communication; education, culture and recreation; health care; other articles and services.*

*3. Survey Methods*

*The prices collection units are selected and determined by sample survey methods, and the original data of consumer prices are collected by specific person in fixed place at fixed time. Data are collected from 88,000 prices collection units in 500 cities and counties of the 31 provinces (autonomous regions and municipalities), which cover shopping malls, supermarkets, open fairs, service outlets and Internet E-commerce suppliers.*

*4. Explanation of date*

*The total data is the same as the high or low value of the classified data sometimes because of the "rounding" reason.*
